PROFESSIONAL SUMMARY
Backend Software Engineer with hands-on expertise designing scalable RESTful APIs, distributed microservices, and asynchro

TECHNICAL SKILLS
- Languages: Python, JavaScript, TypeScript, Go, SQL, Bash
- Backend Frameworks: FastAPI, Node.js, Express, Django, Flask
- Databases & Storage: PostgreSQL, MongoDB, Redis, SQLite, Prisma ORM
- DevOps & Cloud: Docker, Kubernetes, AWS (EC2, S3, RDS), GitHub Actions CI/CD, Linux
- Architecture & Practices: RESTful API Design, Microservices, Event-Driven Architecture, Caching Strategies, Database Indexi

PROJECT EXPERIENCE
1. Distributed Task Queue & Notification Engine (Python, FastAPI, Redis, Docker)
- Architected a distributed background worker system processing over 250,000 asynchronous jobs daily with Redis Streams.
- Reduced API p99 response times from 340ms to 45ms by implementing multi-tiered caching for hot database queries.
- Deployed multi-container environment via Docker Compose and configured automated CI/CD pipeline on GitHub Actions.

2. Cloud Inventory Management API (Node.js, Express, PostgreSQL, Prisma)
- Engineered scalable multi-tenant REST API managing 100,000+ real-time warehouse inventory records.
- Optimized slow SQL queries with compound indexes and query refactoring, achieving a 4x throughput boost.
- Implemented robust role-based access control (RBAC) and JWT authentication with automated token rotation.

EDUCATION
Bachelor of Science in Software Engineering
Graduated August 2024
Relevant Coursework: Distributed Systems, Operating Systems, Relational Database Management, Cloud Computing, Object-O
